

Unifying research, accelerating discovery

Concentriq for Research is the digital pathology platform used by leading life sciences organizations and academic institutions to transform image-based research at scale. It unifies multi-site teams, data, and applications, harmonizing pathology operations to improve collaboration and unlock groundbreaking insights that accelerate drug discovery.

KEY ADVANTAGES:

- Flexible & configurable data model supports any research program & study
- “Pathology’s Search Engine” provides powerful search capability across all data
- Image format-agnostic, with native support for nearly all commonly-used brightfield and fluorescence images
- Launchpad for third-party & homegrown analysis applications, including best-in-class integration with Visiopharm
- Intuitive user experience supports instant sharing and real-time collaboration

Harmonizing pathology operations across the connected enterprise

AUTOMATED & INTUITIVE DATA CAPTURE

Save time and improve data quality by automating the labor-intensive processes of ingesting and organizing images and metadata. Concentriq for Research provides an easy-to-use interface, helping to standardize and accelerate day-to-day digital pathology work.

Features include automated image ingestion based on barcode or file name, mass metadata import, and integrations with LIS/LIMS and other external applications.

CENTRALIZED DATA MANAGEMENT

Create robust, well-curated studies of images and metadata from various sources. With Concentriq for Research, you can eliminate silos to easily incorporate pathology data and analysis results into studies and projects that accommodate any research workflow.

Features include flexible data hierarchies, field library with controlled vocabularies, project templates, and global search.

INTUITIVE & SECURE COLLABORATION

Engage with colleagues, peers, and partners through real-time and asynchronous collaboration and sharing. Secure, global accessibility to a high-performance image management and viewing system makes it easy to quickly share studies and connect for live remote-review sessions.

Features include real-time notifications, instant sharing with project-specific permissions, and live collaboration for an unlimited number of users.

INTEGRATED IMAGE ANALYSIS

Realize the full potential of quantitative analysis and computational pathology by unifying image management and image analysis in a single solution. Better incorporate analysis results into studies and facilitate the use of a comprehensive portfolio of third-party and custom-built image analysis applications.

Features include seamless bi-directional integration of images and data, visualization of image mark-ups and overlays, and global search of analysis results.

ROBUST & SCALABLE ADMINISTRATION

Manage digital pathology at scale with administrative capabilities to support complex multi-site and multi-organization deployments. Concentriq for Research offers intuitive and powerful role-based functionality that enables organizations to securely implement, manage, and scale digital pathology.

Features include roles & permissions, user groups, and fixed field libraries.

Your next major breakthrough may lie in the data you already have.

As life sciences organizations increasingly adopt digital pathology, they are amassing one of the largest collections of healthcare data. Concentriq for Research is enabling these organizations to better manage their day-to-day pathology research while functionalizing this data to power pre-clinical research, clinical trials, and companion diagnostic development. With Concentriq for Research, you can turn volumes of whole slide images into a well-curated, scalable, and easily searchable database of pathology information to accelerate decision making and drive new insights.

Partner Spotlight: Visiopharm

Proscia and Visiopharm have partnered to deliver a best-in-class, unified solution that enables life sciences organizations to streamline research workflows and accelerate breakthroughs. Visiopharm's image analysis suite is among the applications that we've integrated into Concentriq to create a connected digital ecosystem for R&D.

Deploying Concentriq in your organization

OPEN, INTEGRATED,& SCALABLE DIGITAL PATHOLOGY

Concentriq for Research offers built-in integrations with leading scanners and image analysis applications, centralizing all of your pathology images and data on a single platform that meets your organization's ever-changing needs. Whether you're looking to connect with new hardware and software or ingest millions of images, the enterprise-grade solution will scale to support your pathology operations.

FLEXIBLE DEPLOYMENT

Concentriq for Research can be deployed to public and private clouds, as well as on-premises, offering a best-in-class solution that makes installation, maintenance, and scale-up easy and cost-effective. We offer Concentriq for Research on infrastructure provided by our partners: Amazon Web Services (AWS), Microsoft Azure, Google Cloud, and Dell EMC.

INTUITIVE AND CONFIGURABLE

No more "one-size-fits-all software." Every lab environment is different, which is why Concentriq for Research is modular and flexible. From workflows to roles & permissions and integrations, Concentriq for Research is highly configurable to support your team in how it operates.

INDUSTRY LEADING PROFESSIONAL SERVICES & SUPPORT

Whether you're just getting started with digital pathology or looking to scale your implementation, Proscia is your partner in the process. Our Professional Services team helps to guarantee project success by supporting systems analysis, design, data migration, end-user training, and more.

"Having a comprehensive digital pathology solution was the last piece of the puzzle we needed to tie our neurohistology services with our digital workflow. With Concentriq, we can now rapidly provide our clients with both the images and the associated data in a user-friendly way, ultimately speeding up the research process."
